

DATA ANALYTICS - TABLEAU CAPSTONE:

NYC POPS

Exploring NYC Privately Owned Public Spaces.

PRESENTED BY:
HELENE TURRY

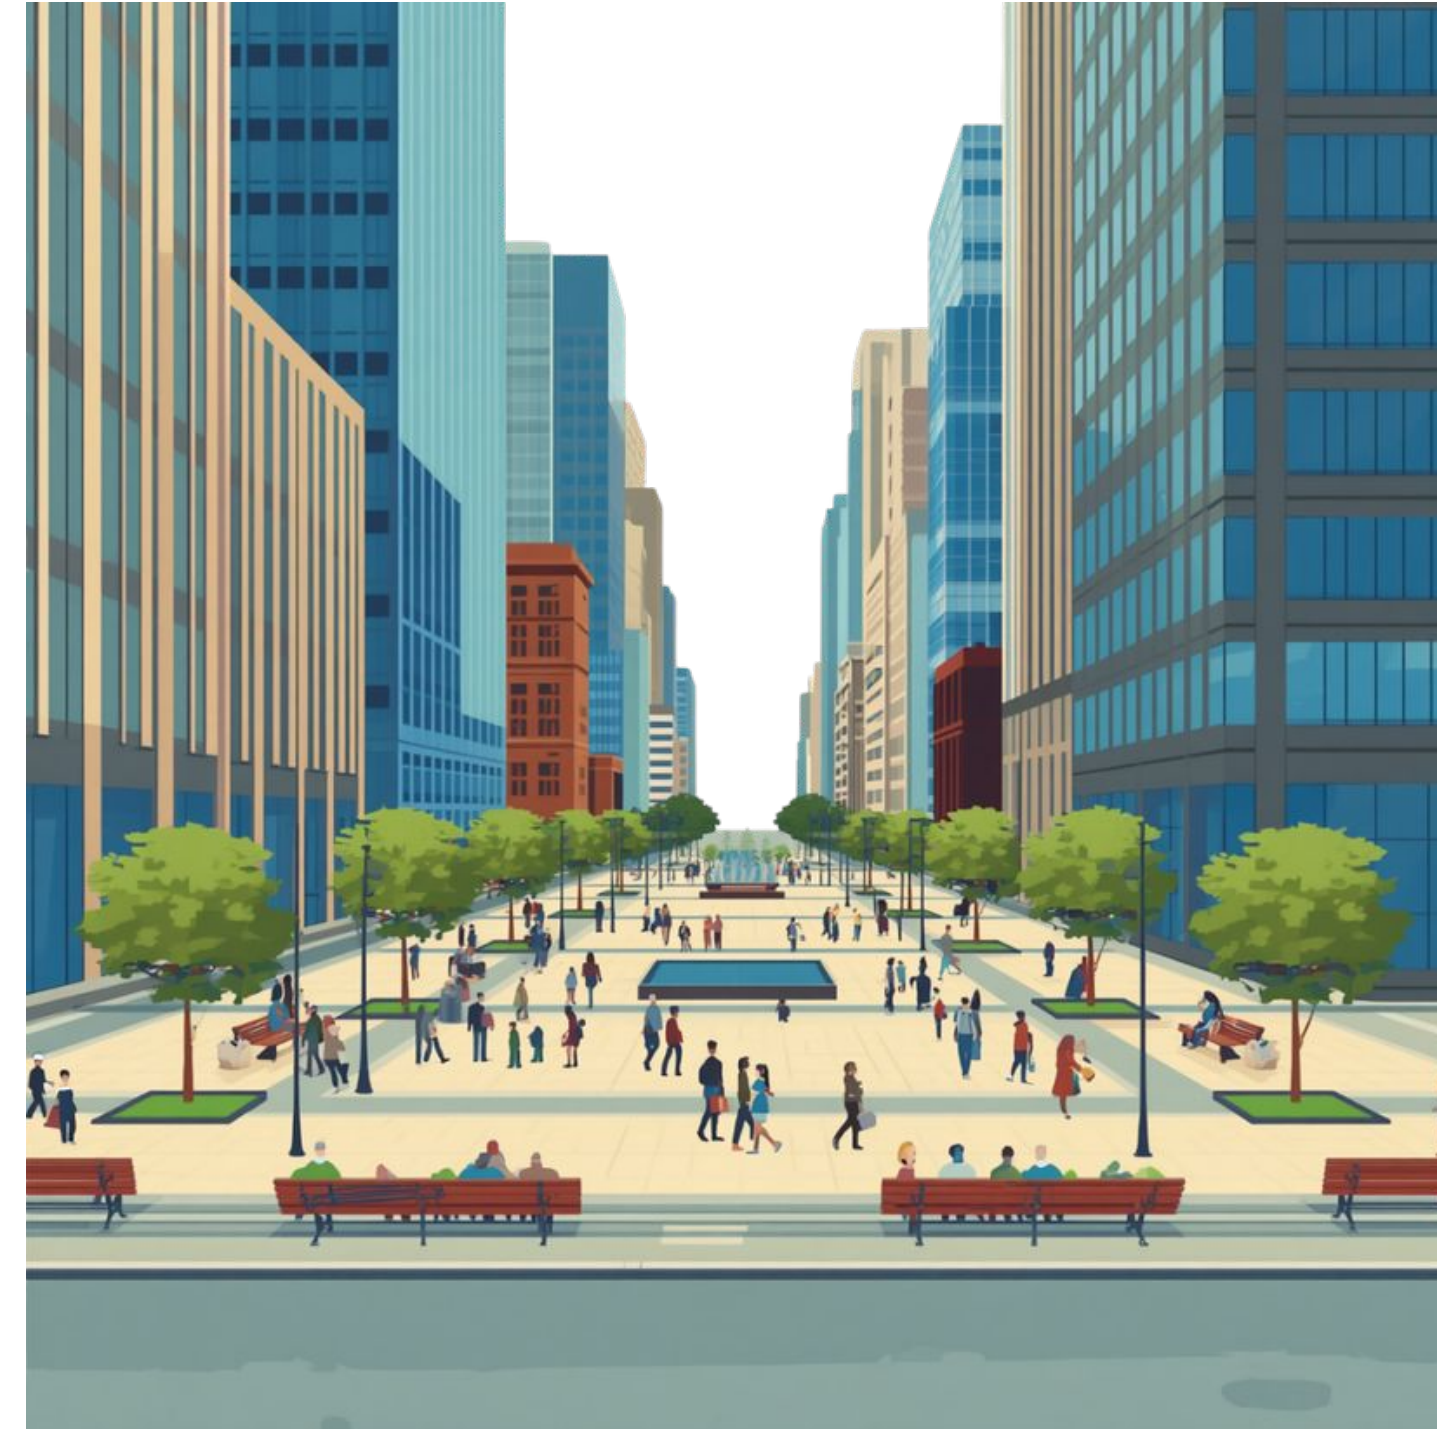

Understanding NYC POPS

Privately Owned Public Spaces (POPS) are publicly accessible areas created and maintained by private developers. Required as part of NYC zoning agreements since the 1960s in exchange for building density bonuses.

Provide open, accessible green and civic spaces across dense urban neighborhoods

Problem Statement and Research Questions

What are the distinguishing characteristics of NYC Privately Owned Public Spaces, and how do they differ among POPS completed in different decades?

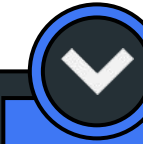

What types of public spaces are most common?

What amenities are most common?

Do amenities differ among POPS completed in different decades?

Where are POPS with these characteristics located?

Data Sources and Methodology

NYC OpenData (October 2025 download) – 392 POPS
<https://data.cityofnewyork.us/resource/rvih-nhyn.csv>

Spatial Analysis – Python for Data cleaning, Tableau mapping tools

Statistical & Visual Analytics – Tableau for insights and reporting

- Two Tableau data sources created:
 - one row per POPS × amenity
 - one row per POPS × space type
- Tableau calculations, filters, parameters, sets and dashboard interactions

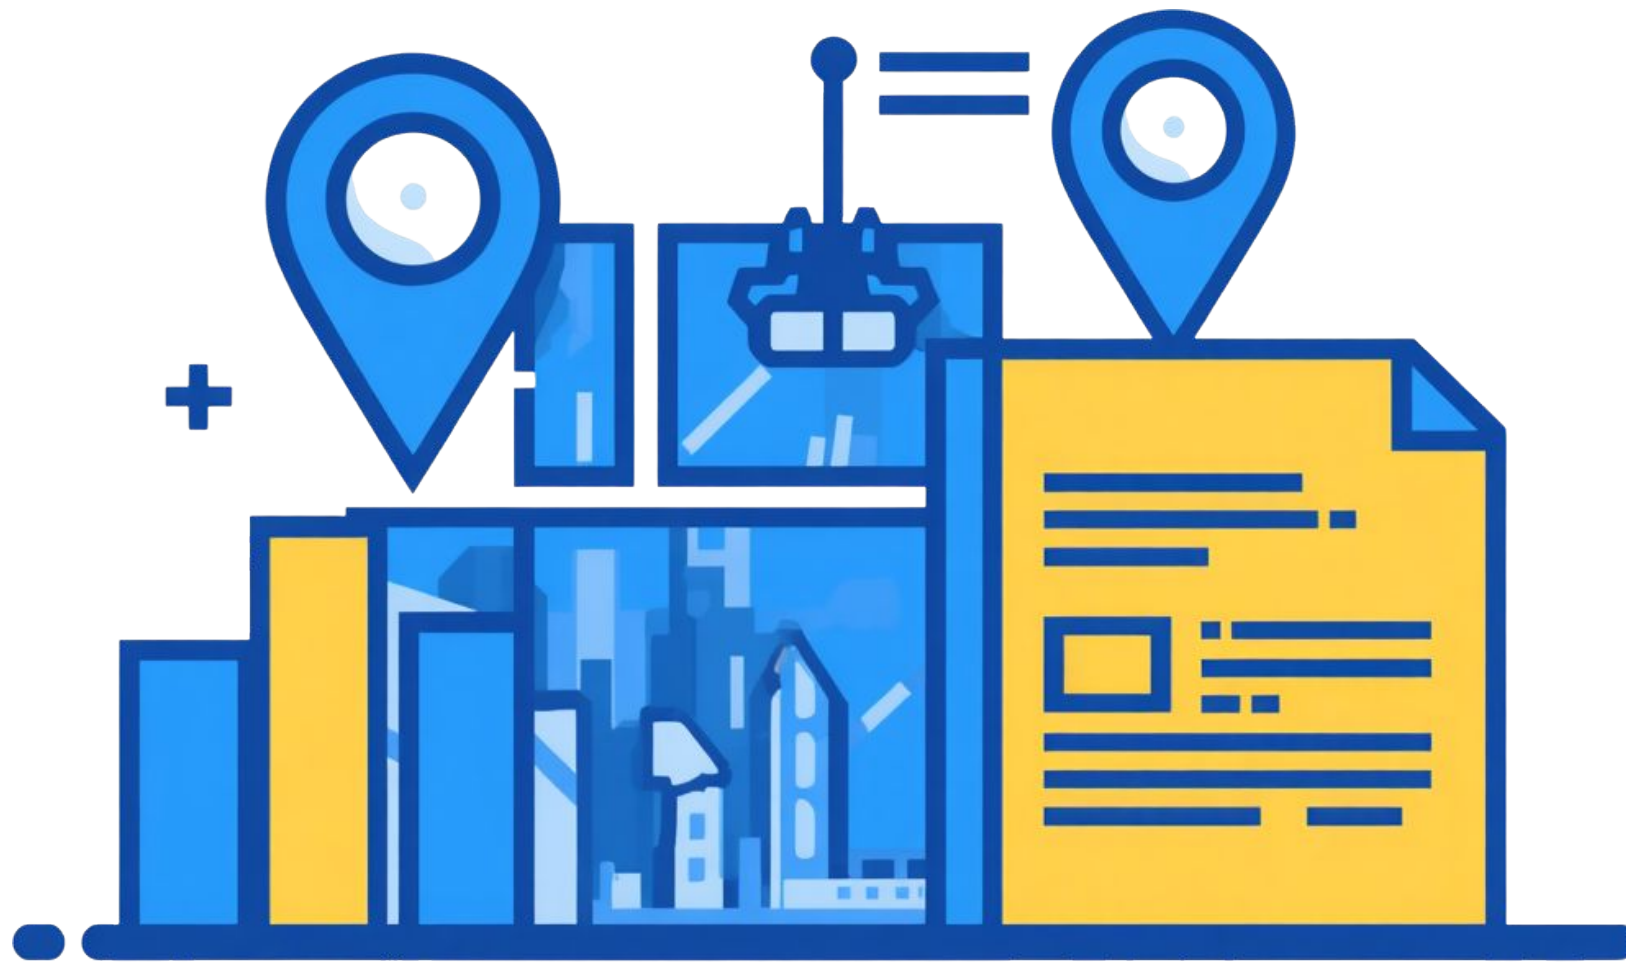

Conclusions

Key Observations

- Plazas and arcades are the most common POPS space types.
- Seating, lighting, planting, and tables are among the most common required amenities.
- POPS completed in later decades generally require a wider variety of amenities than those completed in the 1960s.
- POPS are concentrated in Manhattan, although the interactive map makes it easy to explore locations by decade and amenities.

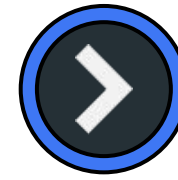

Next Steps

Explore changes associated with zoning revisions.

Incorporate usage or visitation data if available.

Study accessibility and geographic equity in greater detail.

Examine the size of these spaces.

THANK YOU!
